

PAINT FOR PLASTIC & BUMPER

Article No.: **14033** | 1 LColour: **Black** ●

Restore the original look of plastic parts

Plastic bumpers and exterior trims are exposed every day to sunlight, weather conditions, road chemicals and regular washing. Over time, these parts may lose colour intensity and a fresh appearance.

Chamäleon Paint for Plastic & Bumper Art. 14033 is a smooth topcoat specially developed for automotive plastic parts and bumpers. It refreshes faded surfaces, restores a uniform colour impression and provides a professional finish without creating texture

MODERN REPAIR RELEVANCE

On many modern vehicles, smooth painted plastic parts and bumpers are used. After repair, it is therefore important to restore not only the protection of the surface, but also a clean, original-looking finish without unwanted texture

Where can it be used?

- Refreshing faded plastic bumpers and exterior plastic parts
- Finishing repaired plastic components
- Topcoat for new plastic parts
- Interior and exterior automotive plastic parts

Key benefits

- Smooth finish — no texture
- Excellent adhesion to commonly used automotive plastics
- No separate adhesion promoter required
- No additional recoating required
- Short drying times and efficient spray gun application

Perfect partner for Structure Paint

When a textured bumper surface needs to be rebuilt, Structure Paint can be applied first. Art. 14033 can then be used as the final topcoat to create a more uniform appearance, support colour blending and help protect the surface against fading

Technical data

Product	Paint for Plastic & Bumper
Art. No.	14033
Colour	Black
Packaging	1 L
Texture	No
Application	Spray gun
Recommended standard setup	1.4 mm nozzle, 1.8 bar
Area of use	Interior / Exterior
Purpose	Topcoat
Adhesion promoter	Not required
Recoating	Not required

RESTORE. REFRESH. PROTECT.

The simple professional solution for bringing plastic parts and bumpers back to life.
